ISA Term Project Intermediate Explanation

Our app is basically a to-do list. Users can create an account and can create Tasks. The user can change their password if they want to. Passwords are also hashed. Users can login, logout, and delete their account. Tasks can be edited, deleted, marked as completed. Users can only see the tasks that they created, and no one else's tasks. Users can also filter tasks based on completion (see all tasks, only completed tasks, only uncompleted tasks).
